ADVANCE INFORMATION ON FINAL EXAM  
PHILOSOPHY 1 SPRING, 2006

The final examination will take place on Thursday, June 15, from 11:30 a.m. to 2:30 p.m., in WLH 2113 (our regular classroom).

No use of books or notes will be permitted at any time during this exam. Please don’t bring blue books to the exam; we’ll supply paper.

The final exam will cover all course material, but will concentrate somewhat on material covered since the midterm exam.

The first hour and a half of the exam will consist of short-answer questions testing your understanding of course readings and other course materials (handouts and lectures). These questions will be similar in form to the short-answer questions that appeared on the midterm exam. This section of the final exam will count for one-half of your exam grade.

The second hour and a half of the final exam will consist of essay questions drawn from the list below. On the actual exam, two of the A questions and one of the B questions will be posed, and you will be asked to write two essays, one on an A question and one on the B question. This section of the exam will count for one-half of your exam grade, and each of your responses to an essay question counts equally for grading purposes.

A1. Consider these four claims:
   a. The human body is a material thing.
   b. The human mind is a spiritual thing.
   c. Mind and body causally interact.
   d. Spirit and matter do not causally interact.

   The four claims taken together form an inconsistent set: at least one of them must be false. State and explain what you take to be the most plausible position on the relationship between mind and body, in the light of the four claims. Which of the claims do you reject? For what reasons? Your discussion should include consideration of some significant arguments by course authors both for and against the position you are defending.

A2. A zombie is a creature that is physically identical in all respects to a conscious creature but lacks conscious experience. Some philosophers argue that zombies are conceivable, so zombies are metaphysically possible, so physicalism is false. Does the doctrine of logical positivism as affirmed by A.J. Ayer show that the statement that zombies might exist is not a meaningful assertion, and, more broadly, that the supposed philosophical problem concerning the relationship of mind and body is a pseudo-problem? Defend or attack the position on this issue that you are ascribing to Ayer.
A3. J.J. C. Smart argues that just as we have good scientific reason to hold that lightning flashes are identical to electrical discharges between clouds, we have good scientific reason to hold that sensations and more broadly conscious mental experiences are identical to physical states of the brain. State (a) Smart’s position and (b) a significant criticism of it to be found either in the course reading by Jerry Fodor or the one by Frank Jackson. Defend Smart’s view against the criticism or the criticism against Smart’s view.

A4. Functionalism might be thought to be a doctrine that implies “equal rights for robots.” That is to say, if we built a machine that is causally responsive to the environment in a sufficiently complex way, and is responsive to external stimuli and to its own internal states in ways that are sufficiently like the network of functional interconnections on the basis of which we attribute mentality to fellow humans, then we should attribute mental states and a mental life to the machine. The functionalist says the answer to the question whether or not a robot has a mental life is determined not by what stuff it is made of but rather by how the stuff is organized. Explain the functionalist doctrine on the nature of mental states and defend or attack the doctrine in the light of its implications for the attribution of mentality to nonhuman creatures and things.

***************

B1. In his Meditations of First Philosophy, Rene Descartes asserts and argues for controversial positions on the nature and limits of human knowledge, the existence of God, and the relationship between minds and bodies. In a variety of ways, the other course authors surveyed in this course criticize Descartes’s views on all three topics. In your view, on which of these topics (knowledge, God, or mind/body) do Descartes’s views best stand up against the criticisms? On the topic you have selected, defend Descartes’s views against some of these important criticisms. (If you think Descartes’s views on all three topics are hopelessly wrong, explain and defend a view as to how he goes wrong.)

B2. “Anything we can learn about the nature of the universe, we learn from empirical science, or from common-sense observation consistent with science (such as the observations of a good detective searching for clues that will reveal whether a crime was committed and if so, who did it).” Do you agree or disagree with this statement? That is to say, do conceptual or metaphysical or other philosophical arguments generate knowledge about the nature of the universe that is independent of what we learn from science? In answering this question, be sure to consider arguments by course authors that appear to support or undermine the position you aim to defend.
